

experts in lone worker safety

“ I feel much safer knowing that I can quickly get help if needed and my location can be easily pinpointed. I also ensure I have my Peoplesafe device when I carry out market research or go alone to one of our sites.

Emily Nesbit
Sales Manager

”

Building lone worker safety with Linden Homes

Linden Homes is one of the UK's leading specialist house builders. The success of the company is built on a proud reputation for attention to detail, design quality, local knowledge and expertise in developing high quality properties.

This reputation has led to the business itself and Linden property developments being recognised with a number of national awards.

Peoplesafe

We are one of the leading providers of lone worker safety solutions in the UK. Unlike many of our competitors, we operate independently of any device manufacturer, selecting our proposed solutions based on the needs of each individual lone worker.

case study

Why choose Peoplesafe for your lone workers?

- We are experts in lone worker safety with a comprehensive approach and range of products and services to help keep lone workers safe.
- Unlike many of our competitors we operate independently of any device manufacturer.
- Our unique approach starts with our lone worker risk assessment to find individual solutions to help keep each lone worker safe.
- Peoplesafe offers a complete range of lone worker security services including risk assessment, training services, safety devices and expert support.
- 24 hour lost/damaged device replacement service.
- Low set up fees with a 24 month contract.
- And we guarantee to provide exceptional service to each and every customer.....always.

Linden Homes were very keen to protect the health, safety and welfare of sales staff working from their South East office.

Lone workers had previously relied on personal safety alarms but there were very serious concerns that these alarms could be easily knocked out of the hand prior to being activated or that they may not be heard.

Peoplesafe were able to offer a range of alternative lone worker safety devices including one that resembles an ID holder but does in fact contain the latest mobile technology.

The new Identicom device, which can be worn around the neck on a lanyard like a standard ID, enables the wearer to discreetly raise an alarm if threatened and also allows a third party to listen to what is happening and coordinate emergency support if required. The device can also support the pinpointing of a lone worker's location using GSM/LBS technology.

Another innovative feature of the device is that a 'rip alarm' function will be triggered if the device is forcibly removed from the wearer. Sales Manager Emily Nesbitt said; "After viewing a demonstration of a range of devices we chose one of the lone worker safety options from Peoplesafe as we were very impressed with how easy the device was to use.

"We now have sixteen devices from Peoplesafe which has made our lone workers feel much safer when they are showing prospective buyers around the sites".

Lone workers using the Peoplesafe service also have the option to press the device's 'checking in' button when they were entering a potentially hazardous situation, which gave them the reassurance of knowing they were being monitored, and that they were free to press the 'red alert' button if needed.

Once the button has been pressed the Peoplesafe team of lone worker safety experts retrieve information on a lone worker's locality, listen in on the line and coordinate emergency support if required.
