

experts in lone worker safety

“ I was keen to ensure my team were the first to be issued with safety devices from Peoplesafe. Our employees are at risk each time they show prospective buyers around our new properties. They are on their own and out of sight. Many of our sales staff are female and the risks are clear. ”

David Smith
Sales Director of Persimmon Homes
in North Yorkshire

Persimmon help keep lone workers safe with Peoplesafe

Persimmon Homes is the UK's largest house builder building 10,000 new homes every year in more than 400 prime locations.

Founded in 1972, and with their headquarters in historic York, Persimmon are building homes in Scotland through to the North and Midlands, across East Anglia and Wales, down to the South and South West of England.

Peoplesafe

We are one of the leading providers of lone worker safety solutions in the UK. Unlike many of our competitors, we operate independently of any device manufacturer, selecting our proposed solutions based on the needs of each individual lone worker.

case study

As highly responsible employers Persimmon Homes were very aware that team members working in marketing suites were vulnerable to verbal and physical abuse.

Their health and safety team were keen to find a cost effective and efficient means of protecting their lone workers.

After much consideration Persimmon Homes chose lone worker safety experts Peoplesafe who assessed their needs and suggested a solution using an identicom device.

After a successful trial Persimmon have issued safety devices to all lone workers in North Yorkshire.

David Smith, Sales Director of Persimmon Homes in North Yorkshire, said; "Unfortunately some of our lone workers have had to face a wide range of serious threats in the past including verbal abuse, physical abuse, intimidating behaviour and robbery.

"Our lone workers are at a degree of risk each time they show a prospective buyer around our new properties as they are out of sight of the rest of the team – and as many of our staff are female the risks are obvious".

The Peoplesafe safety device being used by Persimmon's lone workers resemble a normal ID holder but with the latest mobile technology to enable users to covertly raise an alarm if they feel threatened.

Lone workers have the option to press the device's 'checking in' button when they are entering a potentially hazardous situation, which gives them the reassurance of knowing they are being monitored, and that they were free to press the red alert button if needed.

Once the button is pressed the Peoplesafe team of lone worker safety experts at the monitoring centre can listen to what is happening and where appropriate record events or coordinate emergency support.
