

experts in lone worker safety

“ Personnel in all areas of the company are using the Peoplesafe service including our Chief Executive, Housing Officers, Scheme Managers, Building Inspectors and HR Personnel. They all now have the reassurance of knowing if they have an accident or are faced with a potentially volatile situation they have the means to raise the alarm. ”

Mark Jackson
Facility and Health and Safety Manager

Peoplesafe is top choice for Rooftop Housing

Rooftop Housing are a community based housing group providing affordable homes and services to people living in towns and villages throughout the Midlands.

Peoplesafe

We are one of the leading providers of lone worker safety solutions in the UK. Unlike many of our competitors, we operate independently of any device manufacturer, selecting our proposed solutions based on the needs of each individual lone worker.

case study

Rooftop Housing carried out a detailed risk assessment to measure the potential hazards facing their lone workers.

Equipped with the result of the risk assessment they selected eleven suppliers of lone worker protection devices and services to present to a team of people who regularly work alone.

Rooftop Housing Facility and Health and Safety Manager Mark Jackson said; "Following the initial 11 presentations we invited three companies back for trials which involved assessing GPS systems, mobile telephones, and the Peoplesafe system."

As a result of the trials the GPS systems were quickly discounted as there was no signal to support the units when the user was inside and traditional mobile phones were thought to be too difficult to use in an emergency and could be knocked out of someone's hand.

The Peoplesafe solution, which used an indenticom device, was the most unobtrusive and easy to use lone worker safety system.

Mark Jenkinson said; "One of my main concerns was the level of support provided by our chosen supplier.

"I wanted our managers to be able to concentrate on their work and not have to worry about personnel in the field unless there was a problem.

"During the trial period the Peoplesafe monitoring centre dealt with five false alarms without contacting a manager whilst another company notified us every time an alarm was triggered.

"In addition Peoplesafe also provided us with detailed weekly reports on connectivity and usage which was extremely informative."

Staff trialling the Peoplesafe service made particular reference to the fact they had the option to press the device's 'checking in' button when they were entering a potentially hazardous situation, which gave them the reassurance of knowing they were being monitored, and that they were free to press the 'red alert' button if needed.

Once the button has been pressed the Peoplesafe team of lone worker safety experts retrieve information on a lone worker's locality, listen in on the line and coordinate emergency support if required.
